# Heated Towel Rails

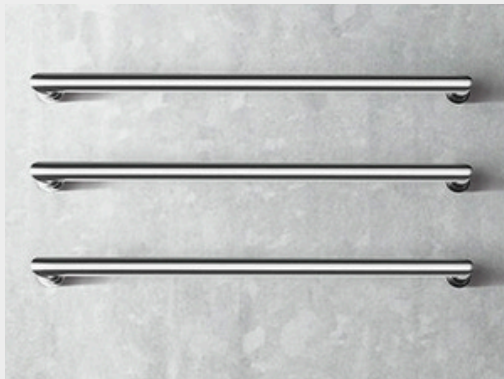

Horizontal Round and Square profile Heated Towel Rails transfer heat to your towels, ensuring they dry quickly and evenly.

Heated towel rails are installed horizontally and can be installed singularly or in multiples, offering you the freedom to choose between the function and style of the latest bathroom trends.

By using multiple single heated rails, you save space, especially in smaller bathrooms, while creating an aesthetically pleasing ladder feature.

# Under Floor Heating to Heat Your Towels

**Choose any towel rail, doesn't need to be heated! Use Coldbuster's under floor heating system to dry and warm your towels.**

If your under-floor heating is under-tile heating, it can be extended from under your floors and up the wall to your towel rails, where it is hidden behind the wall tiles. In this case you would heat your towels simultaneously with your floor heating.

If your under-floor heating is in-screed (or also under tile), a separate on wall towel heating system creates radiant heat from your bathroom wall. These two towel heating options are installed before tiling or plastering, creating a hidden towel heating system.

For complete control, Coldbuster also offers a range of thermostats ensuring you are greeted with the luxury of a warm dry towel when you want. For Single Zone heating control (where your floor and towel heating runs at the same time), Coldbuster offers a range of programmable thermostat options. For bathroom heating with dual heating zones, Coldbuster's exclusive CB Dual Thermostat allows you to run the floor or towel heating system simultaneously or independently. So, speak to our sales team today and find the best solution for your bathroom.

## Extended Under Floor Heating

### **Artist Impression.**

*Once the installation is complete, the heating system will be hidden from view behind the final wall finish.*
